**Annual Report to Services, May 8, 2026**
(NMFS Reference WCR-2014-1502; USFWS Reference 01EWFW00-2016-F-0121)

Report for U.S. Fish and Wildlife Service (USFWS) and National Marine Fisheries Service (NMFS) on shellfish activities authorized with use of the programmatic ESA/EFH biological opinions (NMFS Reference WCR-2014-1502; USFWS Reference 01EWFW00-2016-F-0121)

Prepared by U.S. Army Corps of Engineers (Corps), Regulatory Division, Seattle District
Date: May 8, 2026

Shellfish Activities: As of May 8, 2026, the Seattle District reports 30,071.22 acres (active and fallow) of shellfish activities are currently authorized under the programmatic ESA/EFH biological opinions. This value represents a net decrease of approximately 4,064.67 acres from last year's report of 34,134.89 (a cumulative total of authorized acres since October 1, 2016). An analysis of this variance is provided in the subsequent sections of this report.

Take Limits: We are currently reporting approximately 1,898.09 acres of shellfish activities in Hood Canal summer-run chum (HCSR) critical habitat areas. This is a net decrease of approximately 243.52 acres from last year (2,141.61). The HCSR chum critical habitat acreage limit is 2,412 acres. We have about 513.91 acres remaining in our take limit and are currently reviewing approximately 12.8 acres of activities in HCSR chum critical habitat areas (not authorized as of May 8, 2026). The Seattle District continues to closely monitor the authorizations using the programmatic biological opinions to ensure the acreage does not exceed the incidental take for activities located in HSCR chum critical habitat.

Supporting Information: Attached is a spreadsheet of cumulative total of project authorizations since October 1, 2016, with the following information for each authorization: Corps reference number; applicant name; county; waterbody; mechanical oyster harvest/harrowed per year; fallow acres with native eelgrass returned to cultivation in Puget Sound and Hood Canal; and acres of shellfish activities in HCSR critical habitat (Appendix A). Duplicate data entry fields, such as those where projects were modified or combined under new permit numbers, and several relic NWP 48 entries were removed to prevent double counting of acreage impacts which accounted for last year's erroneous acreage totals. Projects identified with a letter such as "A" or "B" after the reference number reflect a project that had been modified at the applicant's request. Also attached are Entanglement Report (Appendix B) and Berm and Dike Report (Appendix C).

Summary Tables: Below are tables summarizing NMFS (Tables 1-4) and USFWS (Table 5) incidental take activity / acreages authorized between October 1, 2016 and May 8, 2024. Table 4 includes a summary of loose nets and entanglements. Although the Corps may receive numerous reports of loose gear (e.g., oyster/clam bags, geoduck tubes) in any given year, biological opinion reporting requirements are limited to large cover nets loose and entanglements. Table 6 shows a summary of reported berms and dikes.

Table 1. NMFS Incidental Take Summary: **Fallow Areas with Native Eelgrass Returned to Shellfish Activities** over 20-year term (acres), cumulatively, between October 1, 2016 and May 8, 2026. The authorized activities number has changed in waterbodies as applicants are using more sophisticated software to accurately depict square footage of their parcels and the cultivation within those parcels. Previously, applicants were relying on county parcel information, which in many cases inaccurately depicted the size of the parcels and the cultivation area within those parcels. Using more sophisticated software has resulted in improved cultivation accuracy of acres (not actual footprint). Therefore, areas of cultivation were inaccurately characterized and are more refined resulting in a decrease of area. Table includes incidental take limit (acres), remaining acres in take limit and net change from previous report. See Appendix A.

**Fallow Areas with Native Eelgrass Returned to Shellfish Activities**

| Waterbody | Maximum acres of fallow areas with native eelgrass returned to shellfish activities over 20-year term | **Authorized Activities as of May 8, 2026 (acres)** | Remaining in Take Limit (acres) | Change from 2024 Report (acres) |
|---|---|---|---|---|
| Puget Sound/Hood Canal | 2,628 | **3.57** | 2,624.43 | -1.32 |

Table 2. NMFS Incidental Take Summary: **Authorized Activities in Hood Canal Summer-Run Chum Critical Habitat** over 20-year term (acres), cumulatively, between October 1, 2016 and May 8, 2026. Table includes incidental take limit, remaining acres in take limit and net change from previous report. See Appendix A.

**Authorized Activities in Hood Canal Summer-Run Chum Critical Habitat**

| Waterbody | Maximum acres of shellfish activities over 20-year term | **Authorized Activities as of May 8, 2026 (acres)** | Remaining in Take Limit (acres) | Change from 2024 Report (acres) |
|---|---|---|---|---|
| Hood Canal summer-run chum critical habitat (*Hood Canal and in Jefferson, Clallam Counties*) | 2,412 | **1898.09** | 513.91 | -243.52 |

Table 3. NMFS Incidental Take Summary: **Annual Mechanical Oyster Harvest or Harrow Authorized** as of May 8, 2026, in acres per year. The annual mechanical harvest or harrow metric is measured in acres per year and includes authorized acres since October 1, 2016, as updated in any recent authorizations and removal of duplicative relict NWP 48 entries. Table includes remaining acres in take limit, and net change from previous report. See Appendix A.

**Annual Mechanical Oyster Harvest or Harrow Authorized (acres/year)**

| Waterbody | Maximum mechanical oyster harvest or harrowing (acres/year) | **Annual Mechanical Oyster Harvest / Harrow (acres/year)** | Remaining in Take Limit (acres/year) | Change from 2024 Report (acres/year) |
|---|---|---|---|---|
| Willapa Bay | 18,367 | **7,325.48** | 11041.52 | -1284.89 |
| Grays Harbor | 2,763 | **852.72** | 1,910.28 | -15 |

Table 4. NMFS Incidental Take Summary: **Reports of Entanglements or Loose Nets** over 20-year term, between October 1, 2016 and May 8, 2026. Table includes maximum entanglements for specific species and report of loose nets and other species entanglements for all waters (i.e., Puget Sound, Hood Canal, Willapa Bay, and Grays Harbor). See Appendix B.

**Reports of Entanglements or Loose Nets**

| Metric | Maximum Entanglements over 20-year term | **Cumulative Total (entanglements or reports)** | Remaining in Take Limit (entanglements or reports) | Change from 2024 Report (entanglements or reports) |
|---|---|---|---|---|
| Entanglements of PS Chinook, HCSR chum, green sturgeon or canary rockfish (entanglements) | 5 | **0** | 5 | No Change |
| Monitor and report incidents of loose nets, and any entangled fish (reports) | N/A | **4**[1] | N/A | See Note[2] |

[1] Loose nets or other species entanglements reported in Henderson and Totten Inlets and Squamish Harbor (project specific), and Hood Canal (non-project specific).

[2] On October 30, 2025, several surf scoter ducks were reported as entangled in nets on mussel rafts. See Appendix D for additional details.

Table 5. USFWS Incidental Take Summary: **Incidental Take for Bull Trout** over 20-year term, cumulatively, between October 1, 2016 and May 8, 2026.

**Incidental Take for Bull Trout**

| Waterbody | Maximum bull trout take over 20-year term (individuals harmed) | **Number of bull trout harmed (individuals harmed)** | Remaining in Take Limit (individuals harmed) | Change from 2024 Report (individuals harmed) |
|---|---|---|---|---|
| North Puget | 6 | **0** | 6 | No Change |
| South Puget Sound | 2 | **0** | 2 | No Change |
| Grays Harbor | 2 | **0** | 2 | No Change |
| Willapa Bay | 2 | **0** | 2 | No Change |
| Hood Canal | 2 | **0** | 2 | No Change |

Table 6. Current **Report of Dikes and Berms** as of May 8, 2026, with comparison to prior reports (cumulative totals).

**Report of Dikes and Berms**

| **Report Date** | **Count** | **Total Length (linear feet)** |
|---|---|---|
| October 1, 2017 | 18 | 6,921.32 |
| April 9, 2018 | 20 | 13,381.30 |
| April 2, 2019 | 21 | 14,593.30 |
| April 2, 2020 | 21 | 14,593.30 |
| April 2, 2021 | 21 | 14,593.30 |
| April 1, 2022 | 22 | 14,796.50 |
| May 15, 2023 | 22 | 14,796.50 |
| August 6, 2024 | 22 | 14,796.50 |

## Appendices

Appendix A: Commercial Aquaculture Activity Report dated May 8, 2026

Appendix B: Entanglement Report dated May 8, 2026

Appendix C: Berm-Dike Report dated May 8, 2026

Appendix D: Entrapment Report details dated November 19, 2025

***RE: Final Report - Duck mortalities at Taylor Shellfish Farms Totten Inlet mussel rafts NWS-2010-00983-AQ.***

Dear Ms. Blubaugh,

This report is submitted to the Corps as follow up to the initial report submitted on 10/29/2025. In this report, I will provide additional details, edits to the original report and best management practices Taylor Shellfish and its employees will implement to try and prevent future incidents.

On the morning of **10/29/2025**, farm crews arrived at Taylor Shellfish's Totten Inlet mussel rafts to begin harvest. While removing the exterior nets, they noted that several surf scoter ducks ~~had gotten entangled in the nets and drowned.~~

130 SE LYNCH ROAD, SHELTON, WA 98584

WWW.TAYLORSHELLFISH.COM
WWW.TAYLOROYSTERBARS.COM

Edit: The original report stated that the birds had become "caught". However, after clarification, the birds were not entangled in netting. They were found floating, deceased within the raft structure. Total number of animals found was 15.

One week previously while checking on the rafts, crews noted that significant numbers of ducks were congregating around the rafts. On further inspection, they found that ducks had eaten and caused significant damage to the crop. It was decided to install nets around the outer edge of the rafts to protect the remaining rafts. The nets were meant to deter. However, it is possible that by the time the nets were installed, the birds had already developed a habit and were no longer wary of the operation.

Taylor Shellfish has not used nets on its mussel farms for several years, as duck numbers and predation remained low. Taylor farm staff will continue to evaluate bird populations regularly and only use predator nets when necessary, removing them as soon as possible. In the future, we will also attempt to install nets earlier, as well as utilize smaller mesh to prevent mortalities from occurring.

At this time, because nets are still installed along the outer portions of the rafts and high populations of ducks are still present, I do not have a final number of animals affected. We will continue to monitor the farms and provide a final report once nets are removed.

WWW.TAYLOROYSTERBARS.COM

Edit: Nets were repositioned along the exterior rim of the rafts to allow fast release of portions of the net. This would allow crews to create temporary openings for ducks to swim through. As ducks remain within the vicinity of the rafts, the decision was made to continue to leave the nets on until the ducks have moved on.

The nets are 2" square nylon or polyester mesh. This style of net is lightweight for the crew to handle and position and secure along the edge of the raft. No animals have become entangled with it, and the benefits of the net outweigh using a tighter mesh or different material.

As mentioned earlier, crews will watch for growing populations of ducks at the beginning of the season and install nets earlier to deter animals before they become acclimated to the location and the activity.

Crews will also continue to monitor rafts daily when nets are installed and release trapped birds. This practice has been effective since implemented, as no additional deceased birds have been found.

Taylor Shellfish and its mussel crew value the natural and biodiverse environment they work in and were concerned that these actions resulted in bird mortality. We will continue to solicit and integrate recommendations from WDFW and NOAA to reduce risk and avoid these interactions, whenever possible in the future. Please contact me with any comments or questions at erine@taylorshellfish.com, or (360) 432-3348.

Sincerely,

Erin Ewald
